COMPANY INFORMATION

ITC is a software company specializing in the development and implementation of property and casualty insurance systems since 1982. We develop, install and service accounting, rating, policy issuance, statistical, and claims systems for insurance companies, managing general agencies, and surplus lines brokers. Our systems are designed to be fully operational “off the shelf” or if necessary, can be customized to accommodate the way you do business. All our systems operate on the Internet or in a Windows environment.

ITC provides point of sale processing for homeowners, automobile, and personal umbrella business. This system will integrate with ITC rating engine or comparative raters to support single entry input, complete an electronic application, transmit policy data through the Internet, and print applications and policies in the agent’s office.

ITC’s systems integrate with various imaging systems to capture computer generated information without the need to manually scan the document or individually enter the index.
